## QUALITY SERVICING AND REPORTING

Haden's system compliance testing services provide you with the peace of mind that your building's HVAC systems are operating efficiently and in compliance with Australian and New Zealand Standards.

Our specialist testing and commissioning technicians hold the most current certifications. They test equipment against Australian and New Zealand Standards and Building Codes, providing asset condition appraisals and recommendations where required.

Non compliance test results are accompanied by an Engineer's report, followed up with advice and recommendations. Our technicians then plan or perform remedial works or full system upgrades as required, and provide Certification of system compliance testing.

## THE COMPLETE RANGE OF COMPLIANCE TESTING

Haden provides a complete compliance service, designed to meet all statutory requirements, including:

- system balancing and re-commissioning
- duct cleaning to ensure optimum indoor air quality
- legionella and microbial testing
- essential services testing, ensuring your HVAC systems respond effectively in the event of fire
- stair pressurisation, fire equipment and emergency lighting testing.

Our state-of-the-art techniques and equipment, including thermal imaging, provide you with the confidence that you are fulfilling your statutory obligations.

## SERVICE AND SUPPORT

At Haden, we are conversant with the various Building Code requirements and Australian and New Zealand standards. Our 24 hour emergency breakdown service provides you with service assistance nearby to meet your needs, 24 hours a day, 7 days a week.
