

<b>Name:</b>	BTR Foundry – Wingfield Foundry Precinct	<b>Client:</b>	BTR Foundry
<b>Specifying Authority:</b>	Connell Wagner	<b>Site Location:</b>	Wingfield, South Australia
<b>Value at Completion:</b>	\$3 million	<b>Year Completed:</b>	1998

**Project Description:**

Haden recognises the differences between industrial and commercial HVAC and mechanical systems requirements.

Our engineers designed BTR Foundry’s mechanical systems to ensure they were able to withstand the harsh conditions and production processes associated with a foundry’s varied operational requirements.

Working in consultation with the client from the early stages of the project ensured that Haden’s systems were designed and installed to exceed BTR’s expectations.

The scope of the project included the detail design, fabrication, installation and commissioning of the piping, ducting and materials handling systems.

The contract included shop drawing, fabrication and installation of process cooling water systems, ventilation and fume extraction systems and moulding sand recovery systems.

Haden also undertook all associated electrical and control systems and pre-operation commissioning.
